

Driving Gas Control Line Check Valve

QQD6/6.6

1 Overview

Driving gas control line check valve installed on the starting pipe is used to control the flow direction of the driving gas.

It is commonly used in a combined distribution FM200 system to realize the startup of corresponding devices in different protection areas.

2 Technical Parameter

Model	Nominal working pressure	Nominal diameter	Outlet thread	Inlet thread	Open pressure
QQD6/6.6	6.6MPa	6mm	M14*1.5	M14*1.5	0.1MPa
